To: Alex Elvin <elvin@mvcommission.org>;

To the Martha's Vineyard Commission:

Please vote against the use of synthetic materials, particularly plastics derived originally from petrochemicals, whether recycled or not. These materials have been proven to be unstable and to leach into groundwater over time.

Water is a finite and very precious resource here on Martha's Vineyard, and if we damage our water table we will not get a second chance.

It is too great a risk.

Sincerely,
Barbara Lampson
