

Artificial grass

To: Alex Elvin <elvin@mvcommission.org>;

What an atrocity. Mother nature has been providing us with grass to cover the earth for millennia, self-repairing, soft, and fragrant. It is absurd to replace natural grass with plastic—bad for our kids and ourselves, and for insects, birds, and animals small and large! Natural grass is also replenishing the oxygen in the air and binding carbon into the soil, which is good for the climate! Disposing of it is likely to give off toxic gasses as it degrades or is burnt. Please don't let this happen on MV! Thanks, Bonni Widdoes, Edgartown resident (year around).
