I'd like to start off by saying that committing to a project that will spend more than 7 million dollars on new athletic fields is absurd and an abuse of money and power. We all grew up playing on fields just like the ones we already have and they serve their purpose and can be maintained within a reasonable budget. They are native and natural which is what the island strives to represent and preserve. Beyond my environmental concerns, the fact that we, as islanders, constantly find ways to waste massive amounts of public tax dollars is mind boggling. We do not need a new plastic field. I do not support the synthetic turf project. There are much more effective ways to spend money in our education systems.

Thank you.
