Subject: I support the Huntress Plans for MVRHS!

To whom it may concern at the MVC,

I am an islander born and raised. I am also currently working as an ESP and football coach for MVRHS. Since I have gone through the high school here we have had the same sporting facilities and playing surfaces since before I attended the school. It is time to revitalize and give our students the updated, best available surfaces because they deserve it. Current conditions are embarrassing and unsafe, our practice field is covered in glass, trash, and other unsafe items constantly being picked up or picked out of a wound. The game field is not suitable for the needs of our kids and our community. It cannot withstand the needs, nor withstand the time and effort it would take to fertilize, maintain, seed, water, plant air-rate the fields causing significant runoff of chemical fertilizers. I understand the need to make sure the safest conditions are met, and the years of research, current available private donor funds, all support this new facility becoming a reality. No one wants cancer causing issues, and with the due diligence done from our community members we have found the available field to suit those concerns. This issue should not be such a dividing cause for our community, we have found a safe environment to install. I hope this will be your findings as well, as there are no more road blocks to overcome, no more issues to figure out and certainly no cancer causing agents added or made into the field!
