

I object to any form of artificial turf.

Not only do I agree with all those that oppose, I have reviewed other fields in other countries around the world who vehemently reject artificial turf surfaces on the account that is morally irresponsible to use the chemicals to make a toxic surface that will not disintegrate within our lifetime, will pollute our oceans when illegal ocean dumping occurs. I further reject the notion that those teachers parents and trades people sound off as if they are professionals, then listen to the manufacturer about how good their product is.

The major motivation to install this junk surface boils down to greed and ignorance to scientific data. Don't allow this to happen because the uninformed have a say. Get an unbiased report.
