

Dear MV Commission,

I am against the artificial turf field proposed for the high school. I am the executive director at ACE MV, our community's center for post-secondary education. ACE MV is developing renewable energy programs and marine science programs, and we are invested in training Island residents in Wind Energy.

ACE MV is committed to environmentally conscious and "eco-friendly" advancements in career pathways and training. Personally, I am excited to be helping to promote green energy and education that fosters a healthy ecology. It would make zero sense to me to support a new sports facility that is built from plastics, noxious chemicals, pellets, and pollutants.

I urge the MV Commission to deny any attempt to install artificial turf anywhere on Martha's Vineyard, especially in a location so sensitive.

Holly Bellebuono
