Edgartown Great Pond

M.V.C. SAMPLING SUMMARY

Nature of the Pond

Edgartown Great Pond is a coastal salt pond estuary that lies entirely within Edgartown, with the watershed extending to West Tisbury. This pond has many embayments and is primarily used for recreational swimming, fishing and boating, as well as commercial fin-fishing and shellfishing. Recent improvements in water quality may be due to decreases in nitrogen loading and regularly scheduled inlet openings. Eelgrass thrives in the lower portion of the pond, south of Swan’s Neck, but re-establishment in the tributaries will continue with improvements in water quality.

Summary for 2019

Water quality in Edgartown Great Pond is on the rise, however consistent monitoring of trends should continue. As of last year, total nitrogen levels were below the recommended threshold, but more work can be done to further improve eelgrass recovery. Inlet opening events and wastewater treatment facility advancements appear to have improved water quality in the pond and it’s embayments. Areas that don’t flush and have tributaries that contribute nutrient rich water are still a concern. Further improvement of the pond, including decreasing nutrient input from septic and agricultural systems, can only increase the commercial, recreational, and aesthetic value of Edgartown Great Pond.

2019 Sampling Dates

- July 29
- August 28
- October 22

Why Sampling is Important

Field measurements and water samples are collected during the summer months in order to determine water quality of the pond. MVC staff collects water samples as well as a number of indicators of pond health including temperature, oxygen levels, salinity, conductivity, pH, and the time, depth and weather conditions of our sampling. Our sampling protocol is consistent with the Massachusetts Estuaries Project (MEP) which was used to develop the nitrogen threshold. Water samples are tested for several nutrients that in excess can be detrimental to the quality of the water and the systems it supports. Water samples are sent for analysis to the University of Massachusetts at Dartmouth, School of Marine Science and Technology.

Water Quality Index

The water quality index score can range from 0 to 100 (low to high), and is based on parameters that are consistently monitored in this pond. Overall the quality of Edgartown Great Pond is of moderate to high quality. We have seen reductions in harmful nutrients, including nitrogen in recent years but still need further reductions to support benthic and eelgrass recovery. Station EGP-4 is the most impaired relative to the rest of the pond and will continue to be closely monitored to establish data trends and identify sources.

Fun Fact

Field measurements are taken at surface, middle and bottom at all 9 sites in this pond!
Nitrogen is a limiting nutrient and is necessary for plant, phytoplankton, and algae growth but in excess it can be harmful. Nitrogen concentrations remain near the recommended threshold of 0.5 mg/L but can be reduced further to support eelgrass recovery.

Water clarity in 2019 indicated good flushing. Average water clarity was 100% at all stations except for EGP-3 which is typical as EGP-3 is the deepest monitoring point on the pond.

Dissolved Oxygen (DO) in this pond is very good and remains above the stress threshold of 4 mg/L at all monitoring stations. DO above the threshold is ideal and can support natural benthic communities including eelgrass, shellfish, and fin fish in the pond. DO concentrations shown here are a snapshot of conditions at the time the sample was taken. DO levels can widely fluctuate throughout the day and night.

This research was made possible via grants from District Local Technical Assistance Program. The Martha's Vineyard Commission is a regulatory agency tasked with monitoring the environmental health of all towns on Martha's Vineyard. We'd like to extend a special thanks to Paul Bagnall and the Edgartown shellfish staff and the Edgartown Great Pond Foundation for all of their help and knowledge. For more information on water quality on The Vineyard please visit http://www.mvcommission.org/.
