

Alex,

Gary BenDavid and M. Peter Rogers are proposing the construction of a new hangar located at the Martha's Vineyard Airport. Plot Plan enclosed. This hangar will accommodate 8 eight new spaces that will hold small aircraft. The total square footage is 15,180 sqft

This building will be on a lot that the Airport has designated for this type of hangar. The lot is 28,000sqft and the existing vegetation on lot cover is approx. 12,800 sqft.

The new hangar **G** will cover approx. 71% of the existing lot area with the existing space being asphalt for ramp area. The asphalt will connect the North, South and West to the existing asphalt.

The space will be managed by Gary BenDavid and M. Peter Rogers under the name of **Vineyard Hangar G, LLC**.

M. Peter Rogers has been managing Hangars at the Airport for thirty-eight years.

All automobile parking will be in the hangar and the hangars are for Aviation Use only.

Access to the hangar is through a gate that opens with a picture ID badge. The Airport manager regulates all access to the hangars.

The new hangar will be steel with a roof area approx. 13,000sqft and will accommodate solar collectors.

M. Peter Rogers
